

Articque is awarded Qlik's EMEA Technology Partner of the year!

Articque has been named Technology Partner of the Year for Europe, Middle East and Africa during Qconnections 2016, Qlik's annual Global Partner Summit in Orlando, USA.

This nomination emphasizes the high quality of our extension Articque MAP and shows that spatial dimension is now in the center of QlikView® and Qlik Sense® applications.

This award also symbolizes our commitment to all the Qlik teams.

"Qlik is proud to award Articque as the 2016 EMEA Technology Partner of the Year," said Mike Foster, Qlik vice president of strategic partners. "Articque's geo-spatial extension to QlikView and Qlik Sense is proving to add value to numerous Qlik customers who require advanced analytical mapping capabilities to augment their Qlik deployments. Articque is enhancing our customers' experience with Qlik and is expanding the breadth of solutions offered by our joint Solution Providers in the region."

"It is a great honor for us to be chosen as the Technology Partner of the year. It consolidates our position as main actor in geo-BI and values our partnership with Qlik", said H el ene Auguet, Managing Director at Articque.

Articque MAP is present in over 13 countries thanks to our reseller partners with whom we would like to share this success.
